

VULCASEAL[®]

AF300

VULCASEAL AF300 IS A CURATIVE TREATMENT PROVIDING LONG-LASTING PROTECTION AGAINST AND RADICAL DESTRUCTION OF MOSS, LICHEN, ALGAE AND FUNGI.

PRODUCT DESCRIPTION

Vulcaseal AF300 is preventative: the active matter is fixed into the substrate, stopping the proliferation of mould and making the germination of parasitic plants impossible.

Vulcaseal AF300 is curative: destroys all the parasitic vegetation which is then eliminated by rain or by simple brushing.

Vulcaseal AF300 does not change the colour of the substrate, is not a film-former and does not turn yellow. Replaces common acidic or alkaline detergents, which are always harmful to substrates. Inoffensive towards the substrates.

Vulcaseal AF300 is recommended to treat walls, roofs, balconies, fountains, basins, monuments, fences, terraces, patio blocks, boat hulls, awning blinds and tennis courts.

Vulcaseal AF300 has residual effects for 2 to 3 years after application (depending on the exposure).

CHARACTERISTICS

Colourless, so does not alter the aesthetics or nature of the substrate

Not hazardous

Easy to use

APPLICATION

Take care not to spray onto the surrounding vegetation.

We recommend wearing gloves and safety goggles during application.

VULCASEAL[®]

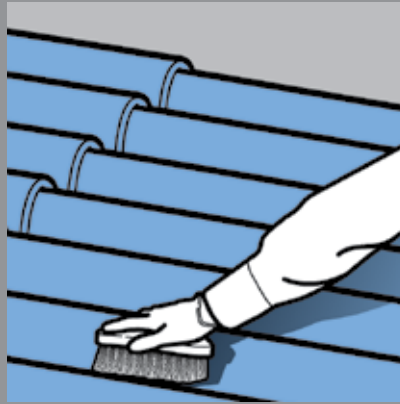

AF300

STEP 1

VULCAN AF300 is concentrated and needs to be diluted 1: 4 with water.

Do not forget to shake the container before application.

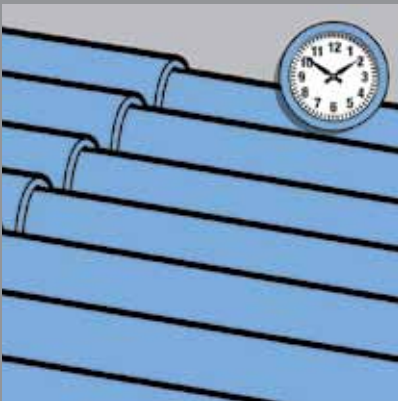

STEP 2

If the substrate is badly infected, try brushing it down with a scrubbing brush before application.

STEP 3

Spray the product with a low pressure sprayer until the surface is saturated.

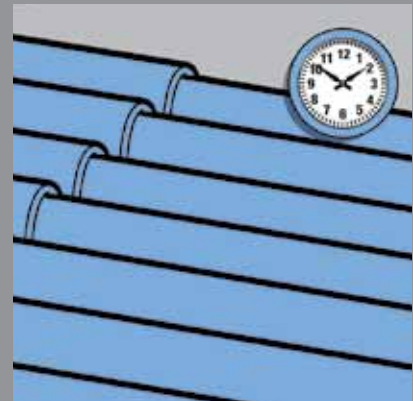

STEP 4

Allow to act for 10 to 15 days. Be careful, as if applying in cold weather (less than 10°C), the demossing will take longer.

STEP 5

Eliminate the residue by brushing or by just letting the weather take care of it naturally.

WARNING

If it rains in the 48 hours following the treatment, it must be repeated.

TOOLS REQUIRED

Scrubbing Brush

Low Pressure Washer

COVERAGE

Coverage depends on the material's porosity. These figures are approximate and should be used as a guideline:

1 Litre of concentrate = 20 - 50m².

STORAGE

Lifespan: 12 months. Keep in a cool, dry place, away from extreme cold. Do not store in condition below 5°C.

PERFORMANCE

After 8-10 days: optimal performance
